

Product Requirements Document (PRD): SplitForFree

Version 1.1

Date: June 28, 2025

1. Introduction

Vision: A frictionless expense-sharing app combining Splitwise's core functionality with AI-driven enhancements and voice-first innovation.

Goals:

1. Replicate all Splitwise features flawlessly.
2. Introduce differentiated features: AI forecasting, UPI payments, and voice expense entry.
3. Prioritize zero-trust security and multi-platform accessibility.

2. Core Features (Splitwise Parity)

User Management

- Sign up/login (email, Google, Facebook)
- Profile customization (photo, currency preferences)
- Privacy controls (data sharing permissions)

Groups & Friends

- Create public/private groups (e.g., "Roommates," "Europe Trip")
- Add/remove members, assign group roles (admin, member)

Expense Tracking

- Add expenses (amount, description, date, category, payer)
- Split methods: equal, percentage, shares, custom amounts
- Edit/delete expenses with audit trails

Balances & Settlements

- Real-time debt tracking ("You owe \$X to Y")
- Settle debts (mark as paid, offline tracking)
- Balance history export (CSV/PDF)

Notifications & Activity

- Push/email alerts for new expenses, comments, settlements
- Group activity feed with filters

Additional Basics

- Multi-currency support (auto-conversion via live FX rates)
- Expense comments/attachments (images, PDFs)
- Dark mode, accessibility settings

3. Differentiators

1. UPI Instant Payment Gateway (India-First)

Feature:

- UPI ID registration in user profiles (VPA-based: user@upi)
- One-click "Settle Now" button triggering UPI payment requests
- Auto-update of balances upon successful transaction

Security:

- Masked UPI IDs visible only to verified group members
- Two-factor authentication for payment confirmations

Fallback: Global Stripe/PayPal integration for non-UPI users

2. Voice-First Expense Logging

Feature:

- Speech-to-Expense engine: "Alexa-style" natural commands
 - Example: "Log ₹800 for dinner with Priya yesterday, split equally"

Auto-Parsing: Extracts:

- Amount + currency

- Description
- Date/time (default: current time)
- Participants (via contact matching)
- Split method (equal/percentage/custom)

Workflow:

1. User taps mic icon
2. Speaks command (supports 20+ languages)
3. System displays parsed data for confirmation/edit
4. Saves on voice confirmation

Accuracy Boosts:

- Context-aware NLP (learns user's frequent groups/contacts)
- Background noise suppression

3. Shared Budgets & Goals

Feature:

- Set group budgets (e.g., "Vacation Fund: \$1,000") with progress dashboards.

Why? Encourages collective financial discipline.

5. Non-Functional Requirements

Voice Performance:

- Response time < 1.5s (WiFi), < 2.5s (4G)
- Accuracy: $\geq 92\%$ for core fields (amount/people)

UPI Requirements:

- NPCI certification compliance
- End-to-end encryption for payment metadata

Forecasting:

- Explainable AI (show data sources for predictions)
- Opt-in data sharing for anonymized benchmarking

6. Metrics for Success

Metric	Target
Voice Entry Adoption	$\geq 35\%$ of users
UPI Success Rate	$\geq 98\%$
Forecast Accuracy (Phase 2)	$\pm 15\%$ variance
Voice Error Rate	$\leq 8\%$
